

2021-2022 #5

Following government instructions to reopen school activities as soon as will be possible, ISE is collecting information about students ranging between the ages of 12 to 18 who would like to get the COVID-19 Pfizer Vaccine. Khun Maam will register the students and deliver forms to be signed for parents' permission.

During this week, students began the MAP Growth Test, these important exams measure achievement and growth in mathematics, language, and reading. This assessment helps teachers with understanding the knowledge of the students according to their grade level and compare the scores with international standards. Additionally, the test reports are data that are to be used by the administrator to consider where the improvement has to be done in the school related to the academic level.

Pre-K

"Our youngest Eagles in Pre-k have been learning to subitize in the last two weeks. To subitize is to instantly recognize the number of objects without actually counting them one by one. Even before starting to count, young children know what is more, or what is less. This ability to give a rough estimate of the number of objects is called subitizing. Subitizing helps children develop a better understanding of numbers and their underlying meaning."

Subitizing Numbers

What's the number? Say it fast!

Subitizing Numbers

What's the number? Say it fast!

The grade 7 & 8 art students have been learning about contrast, an important design principle. The students began by drawing themselves (their silhouette side profile) using only black and white. They then proceeded to look at other colour relationships and contrast like texture and value, as well as the effects of a simple arrangement of opposite elements in a composition.

Middle School

Thai for Non-Thai

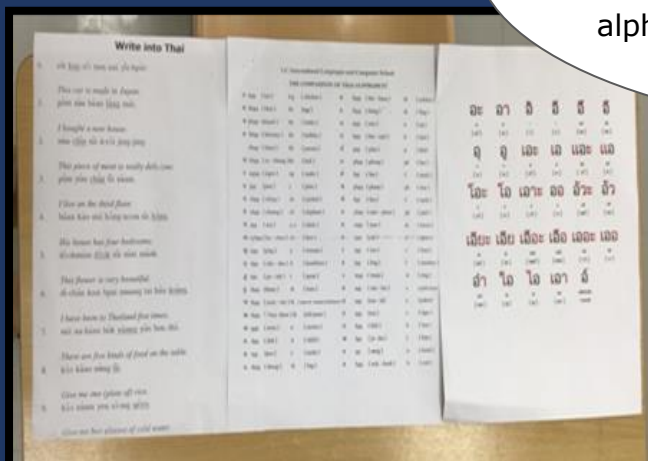

67

Grade 7 Non-Thai students have been working on writing and vocabulary building by finding the consonants to match with pictures and unscramble words to make sentences.

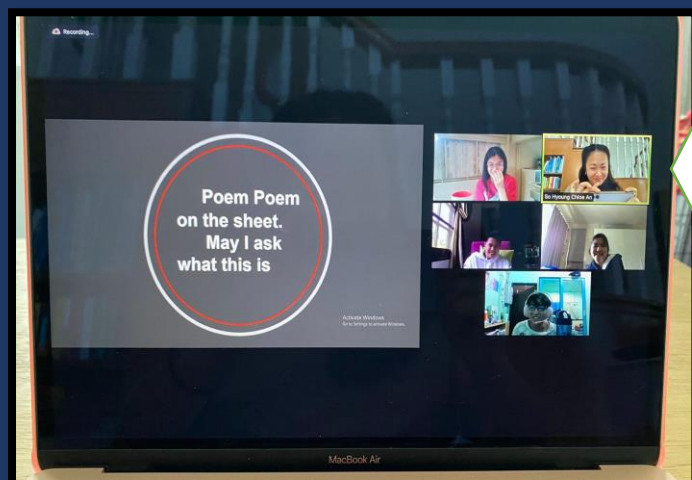

68

Grade 8 Non-Thai students have been learning how to write from karaoke to Thai by using vowel chart and the comparison of Thai alphabets.

G11

Grade 11 IB English Language and Literature began with an in-depth revision of the importance of understanding the various elements of literature. The students were all responsible for drawing upon their own knowledge from the literature that they've read and explained to their classmates the author's intentions and how authors communicate and create meaning. They have also finished their very first translated work, *A Child of the Northeast* by Kampon Boontawee.

G11

Grade 11 chemistry is learning about Modern Quantum Theory and how to construct electron orbital diagrams. The students love to show their work to the rest of the class!
